Cinema

Batch Code: 2FSD1

Start Date: 17th February 2025

End Date: 28th February 2025

Name of Faculty: Indah Ayu Yuliani, ST, MM

Names of Developer:

1. Namira Assalwa

2. Zulfarida

3. Muhammad Adib Arkan

Date of Submission : 18th March 2025

CERTIFICATE

This is to certify that this report titled “Cinema” embodies the original work done by Namira Assaalwa, Zulfarida, and Muhammad Adib Arkan. Project in partial fulfillment of their course requirement at NIIT.

Coordinator:
Indah Ayu Yuliani

ACKNOWLEDGEMENT

Authors would like to praise to Allah, Most Merciful bless and so authors can finish this project, with entitled “Cinema”. Author would like to thanks to Mrs. Indah Ayu Yuliani as lecturer who has given usefull suggestion which are help authors in writings this paper.

The writer realized that this paper far form perfection, then the writer will be very unfettered the chest and was encouraged, if colleagues and the guide’s agreeing lecturer gave the suggestion & critiscm for this paper perfection.

SYSTEM ANALYSIS

System Summary:

This system is designed to manage cinema operations with four main components: Login, Ticketing Booking System, Transaction, and Ticket Receipt. In the Login section, employees verify themselves using a username and password. After successfully logging in, employees can access the Ticketing Booking System section, where customers can select the film, showtime, and number of tickets they wish to purchase. This system does not limit the purchase of tickets for each film, allowing customers to buy as many tickets as they want.

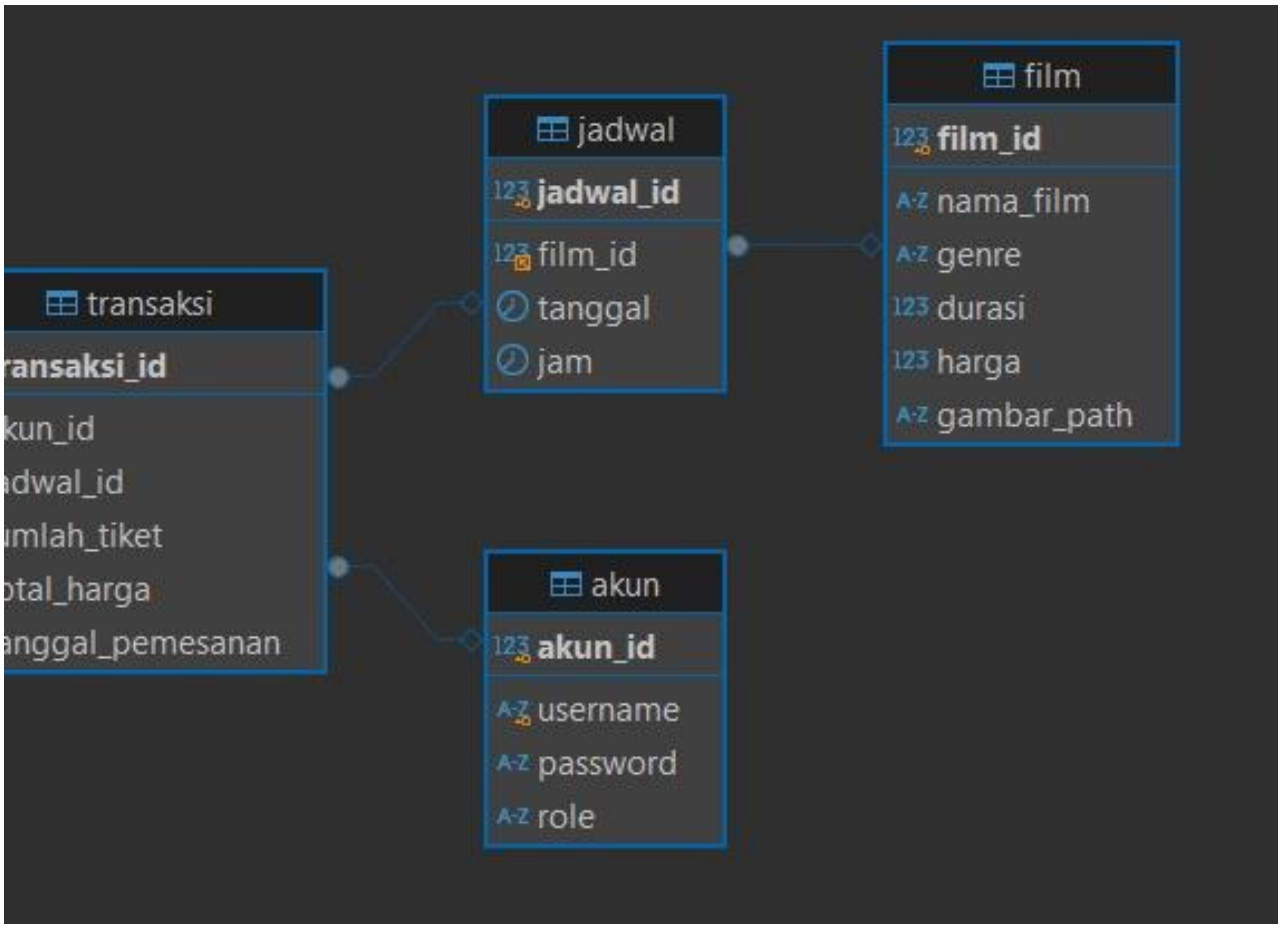

After successfully logging in, the admin has special access to schedule films. The admin can select the film to be scheduled and has the ability to edit film information, such as the title, synopsis, duration, and adjust the showtime as needed. After selecting a film, the admin can access and manage the film's showtime schedule. Additionally, the admin can directly choose the ticket category to be transacted after logging in.

On the Transaction page, the admin can view the details of the film ticket or the transaction being processed. If the transaction details are correct, the admin can immediately confirm the transaction. Once the transaction is confirmed, the details of the film ticket order will appear, including film information, showtime, number of tickets, and total price.

With these features, the cinema management system becomes more efficient and makes it easier for both employees and admins to manage daily operations, from film scheduling to the ticket transaction process.
